

## Salmon farming in the Kaliningrad region

Aleksandra Minashkina,  
assistant of the Department of Ichthyology and Ecology

The development of the fishery complex of the Kaliningrad region is one of the main priorities in the region's economy. The main goal of the country's economic development in the economic development sector is to meet the needs of customers.

The period of implementation of the salmon breeding project in the Kaliningrad region is from 4 to 6 years.

A new promising direction for the Kaliningrad region: the cultivation of Baltic salmon using the technology of a closed water supply cycle

There are fish processing facilities in the Kaliningrad region. Thus, this makes it possible to start producing products from farmed fish with high added value.

The capacity of the salmon reproduction plant will be 3 thousand tons per year

**Kaliningrad Technical University trains specialists in fisheries, and salmon farming is no exception.**
