

Mission: to care for public and animal health, food and environmental quality as well as for sustainable use of fish and other water biological resources

Hatcheries implement fish stocking program and release **>2 600 000** fries and **11 600 000** fish larvae annually. Fries of steelhead trout, sturgeon, pikeperch, freshwater cod, and carp are being cultivated.

Aquaculture Research and Education Centre provides:

- seminars;
- theoretical and practical training of specialists;
- consultations for fish breeders in Latvia;
- diagnosing of fish diseases;
- workplace for researchers.

Recent research: intensive full-cycle cultivation of pikeperch in RAS and the effectiveness of food additives (propolis and spirulina) for fish.
